BASIC-256 Portable

Using KEYMACRO you can easily code functions into your source code, to be triggered by the keyboard. To do this, type a string of characters and press to evaluate that string. You will notice that the keys of the keyboard have been replaced with the keystrokes, so when you press the string is evaluated. KEYMACRO is useful to make commands into your source code and program for example with this you can make some log messages, have reminders of work to do, or even have two or more strings that are evaluated at once. The user also has the option of having the string stored into variables. Once the string is evaluated, you can evaluate the variables and use the function eval (which evaluates strings, variables, etc). In addition to this, you can store the state in a time variable and the user can simply go into the function again to continue. The basic version of KEYMACRO has 7 functions, such as the eval function that evaluates a string, the other functions stores values and variables into variables, and more functions for using the keyboard as the input device. This is useful to make different user interfaces, for example there is the KEYMACRO/OS which lets you code with the keyboard and then execute the source code. What's New in V 1.7: - Full screen mode- Added some documentation- Added an option for registering mouse events- Added an option to enable more powerful functionality- Added the "Add a parameter"- Added some missing places for strings- Added more "change of language"- Added "reset mouse" option- Added more mouse controls- Added the option to "Enable/Disable macro"- Added more mouse controls- Added a translation to Polish- Added some features for exponents KEYMACRO Features: # Features supported in the basic version: - You can create and execute functions. - You can store and store the state of a function. - You can have more than one string/variable at once. # Features supported in the basic version: # Features supported in the basic version: - You can have strings and variables that are evaluated. - You can use eval. - You can store the current state and state in time. - You can return to the currently stored state with the setstate function. # Functions supported in the basic version: # Functions supported in the basic version: - main-func: calls main function - var-func: stores 1d6a3396d6

BASIC-256 Portable

BASIC-256 Portable is a useful tool which enables individuals to quickly learn programming through BASIC. This is the portable version of BASIC-256, meaning it contains all the options present in the installer counterpart, only you can bypass installation. Furthermore, you can copy the program files to any location on the hard disk, in order to easily run in from there, by clicking on the executable. You can even drop these to a portable storage device, such as a USB flash drive, so as to use this software utility on any computer you have access to. It is also important to keep in mind that the Windows registry and Start menu/screen are not going to be affected by the app in any way. The interface is simple and intuitive, allowing any type of person to handle it, regardless of their previous experience with computers. The Help contents are extensive, thus ensuring the fact that you can use the program to its fullest potential. After you have written a few lines of code, running or debugging it is possible. Any errors that might have occurred are going to be displayed in a small panel along with type and number of line. It is possible to undo or redo your actions, copy, cut and paste, as well as access a find and replace tool. From the preferences panel you can set a password, allow SYSTEM or GETSETTING/SETSETTING statements and show runtime warning messages. All in all, BASIC-256 Portable is a very efficient piece of software when it comes to leaning the basics of computer programming. CPU and memory usage is minimal, while response time is very good. System Requirements:

NOTE: This game requires a WDDm to play, so I highly recommend getting this, it will work great with either the 1080 or 720p with medium quality settings. PRINTS: Turns out that my printer just can't handle printing these for some reason, so I will be selling prints for \$5 if you'd like to get one, I would love to get more prints to sell but it is my goal to have as many prints as possible for this project! After the Kickstarter campaign is over, I plan
