You might need a little more in this case. Autonomic nervous system dysfunction associated with infarction and hemorrhage of the striatum in rats. We studied the autonomic nervous system in rats after damage to a striatal area, including an ischemic lesion, in order to determine the role of the autonomic nervous system in ischemic damage to the striatum. We compared autonomic nervous system dysfunction in rats after ischemia and hemorrhage of the striatum with the functional state of the autonomic nervous system and the excitability of striatal neurons in intact rats, and we observed the autonomic function before and after hemiparalysis. Reversible sympathetic overactivity was observed after ischemia in the early recovery stage, and it was similar to the state associated with muscular denervation. Sympathetic overactivity could be induced by infarction, but sympathetic activity was suppressed during hypoxic/ischemic conditions. It is speculated that the ability of the injured brain to suppress sympathetic overactivity is an important factor in brain recovery. Sympathetic overactivity was observed in the late recovery stage. This sympathetic overactivity was ascribed to the transmission of the tonic inhibitory effect of the striatum on sympathetic outflow. As for hemorrhage, sympathetic overactivity was observed in the early recovery stage. A similar response to ischemia was also observed after hemorrhage of the striatum. We conclude that physiological and pathological responses in the autonomic nervous system are closely related with neural recovery after ischemia and hemorrhage of the striatum.Vancouver Canucks forward Jannik Hansen will miss the remainder of the 2017-18 National Hockey League season, and the majority of next season, after the team announced that he has been diagnosed with testicular cancer.
