Bad Dream: Fever is a free point-and-click adventure, with different endings and several blood-spattered scenes in the dystopian future. Bad Dream: Fever continues the world of the previous game. The idea behind the game is simple - try to figure out what happened to the character. The game is divided into three episodes: Bad Dream: Fever is the first adventure of the developer. Bad Dream: Fever is the second adventure of the developer. Bad Dream: Fever is the third adventure of the developer. Bad Dream: Fever was released in December 2013 for free on Internet.

Bad Dream: Fever was developed by Mario Giannetti. Regulation of estradiol, progesterone, androstenedione and dehydroepiandrosterone-sulfate by repeated administration of progesterone to intact rats. An i.p. injection of progesterone (P) in a volume of 0.3 ml at a dose of 3 mg/100 g body wt. in the presence of s.c. estrogen (E) given 24 h later does not influence the serum levels of estradiol and progesterone, whereas it elevates the serum concentration of androstenedione by 10- to 12-fold

and that of dehydroepiandrosterone sulfate (DHEAS) by about 20-fold, measured for 3 to 5 days. An i.p. administration of P in a volume of 0.6 ml in the presence of i.m. E 5 days prior to P increases the body weight by 10-20% and reduces the serum level of E to 10% of control values. In contrast, repeated administration of P in volumes of 0.3, 0.6 or 1.0 ml in the presence of E simultaneously increases the levels of E by 300- to 500-fold and that of DHEAS by about 10- to 20-fold. The sequential administration of P and E in a volume of 0.3 ml increases the serum level of DHEAS by about 6- to 10-fold. Progesterone in a dose of 10 mg/100 g body wt. stimulates the secretion of androstenedione in the range of 150 to 200% when given in combination with E, but in combination with E + 3 mg P/100 g body wt. alone, the serum concentration of androstenedione is increased by only about 30%. Neither the simultaneous administration of P in a
